Custom Ablation:
Custom Ablation is a new type of surgery that uses low-energy laser light to map the eye. From this map, a more customized surgery can be performed for patients that normal LASIK would not help.

Pricing
The “Individual Care” package which includes correction on both eyes and follow up care for the year costs only $3,500. Throughout the entire process, you will interact directly with Dr. Boop who will provide excellent individual attention.

Other Services:
In addition to providing laser eye surgery, Dr. Boop is also a well-renowned ophthalmologist. Voted the best ophthalmologist in Lubbock three years running, Dr. Boop is able to help you with your contact and glasses needs if you should decide that LASIK is not for you.

Dr. Boop’s History:

Dr. Boop has been practicing laser eye surgery in Lubbock for twelve years. During this time he has received numerous awards and recognition for excelling in the laser eye surgery field.

After receiving his bachelor at Cornell, he earned his M.D. at New York Medical College, then continued his training at Blodgett Memorial Medical Center, Texas Tech University Health Sciences Center, and Kresge Eye Institute of Wayne State University.

Not only has Dr. Boop received many accolades in the field of laser eye surgery but also in the field of ophthalmology. He is also certified to screen for corneal diseases and to prescribe contacts and glasses.

LASIK:

LASIK is an outpatient surgery that only takes about five minutes.

During the procedure, the cornea is reshaped which changes how light is reflected into the eye and thus correcting vision problems.

Patients should be at least 22 years of age and have stable vision.

Procedure:

During LASIK surgery, a small flap is cut back and held while a precision laser slightly modifies the shape of the eye. This slight change made to the eye affects the way that light projects on the focal point. Correcting the shape of the eye corrects the way the light bends and thus vision.

Recovery Time:

The recovery time for LASIK surgery is very short, usually only about 12-24 hours. During this time, a protective shield or sunglasses should be worn to help the healing process.

Individual attention is of primary concern with Dr. Boop. A consultation can be setup in order to find out more information.

Appointments can be made during the week not only to find out more but also to set up initial screenings and operating timelines.

Please call 806-792-0785 to schedule a meeting time.
